With Click Studios optional High Availability (HA) module for Passwordstate you can guarantee you'll always have access to your essential password resources.

Provide your business with access to a read-only replica of your passwords with full auditing. For even greater levels of availability configure your HA implementation in Active/Active Mode.

Empowering more than 29,000 Customers and 370,000 Security & IT Professionals globally, Click Studios Passwordstate is the web-based solution for Enterprise Password Management.

HA Module Overview

The Passwordstate HA module provides a read-only replica of your production installation in an Active/Passive configuration by default.

This allows users to perform all normal operations within Passwordstate except those that modify data. It's designed to provide access to view your passwords in the event your production installation becomes unavailable. Even though this replica is read only, full auditing of access is recorded locally and replicated back to the primary server once it's available again.

Active / Passive Configuration

Active / Active Configuration

When configured in Active/Active mode users can update data in both web site instances of Passwordstate. This architecture requires a Load Balancer to monitor the availability of the Passwordstate web servers and automatically fail over if one cannot be communicated with.

Microsoft SQL Server Basic Availability, SQL Clustering and Always On High Availability Groups are used to monitor availability of both SQL Server instances, and perform automatic failover in the event where one server becomes unavailable.

Click Studios (SA) Pty Ltd is a software development company specialising in the development of a secure Enterprise Password Management solution called Passwordstate.

Click Studios is proud of its support for small business, Registered Charities and Education organisations.

Passwordstate is free for up to 5 users. Registered Charities and Education Providers receive a 30% license discount in support of the positive impact they have in our communities.
